

Angular assignment on component communications

Create Angular application to demonstrate about component communications as described below.

1. Design the screen as given below in Angular application

Counter APP

+10 5 +20 2 -5 1 -10 2

Total Count: 65

2. **+10, +20, -5, -10** are the labels for the buttons given
3. **5, 2, 1, 2** are the button hit count. +10 button was hit 5 times, +20 button was hit 2 times, -5 button was hit 1 time and -10 button was hit 2 times
4. Calculate total count of button hit labels. Example +10 button was hit 5 time. So **5 X 10 = 50**
+20 button was hit 2 times . So **2 X 20 = 40**
-5 button was hit 1 time. So **1 X -5 = -5**
-10 button was hit 2 times. So **2 X -10 = -20**
Total count is **50 + 40 - 5 - 20 = 65**
5. Calculate **Button hit count** in **Buttons** component
6. Calculate **Total Count** in **Summary** component
7. Make sure **Buttons** component is Child of **App** component
8. Make sure **Summary** component is child of **App** component
